

# *The* **Cambridge**

**“The Cambridge has been designed specifically for use with a mobile hoist, having the Nursing Home and Carer environments in mind.”**

This exciting new design of chair has “Electric Cordless Operation” using a self powered unit that is charged overnight and will operate in normal use for approximately 10 days between charges. This enables the carer to push the chair from room to room without having to worry about trailing electric cables.

The Recline Only action has 2 motors that offer a Tilt-in-Space facility, Trendelenburg position and independent operation of the back and footrest which folds underneath the chair.

The Cambridge also has the following features, 5” diameter castors (braked to rear), an ergonomically designed push handle and Vasco Elastic foam to the seat.

Finally, we have a host of options and accessories that include Panvelle Stretch fabric, lateral supports, removable arms, side pockets, headroll and pressure relief foam and Akton Visco Polymer sheet for the back and footrest.

***\*Made to measure, with a 5 week average delivery time.***
