➤ DOLOMITE ALPHA

Customised Walking Solutions

The **DOLOMITE ALPHA** is a four wheeled walker with a comprehensive range of options that can provide additional support for differing conditions from arthritis, orthopaedic needs, post-operation care to gait training. In particular the handle and brake selection enable the frame to be adapted to individual requirements.

➤ Infinite adjustable handle

The basic version of **DOLOMITE ALPHA** has the necessary height, width and depth adjustments needed to provide the user requiring extra support with a good walking position. The rounded armrests offer secure and comfortable support for the user's forearms.

➤ Advanced Customisation

The **DOLOMITE ALPHA ADVANCED** is unique in the opportunities it presents for multi-directional adjustments afforded by the ball-and-socket design. The angle of the handles, the operating direction of the brakes and height of the brake handle can all be set as required. This configurability can offer pressure management to the users suffering from high levels of discomfort due to the nature of conditions.

Options and Features

Platform support

Large rest area with platform support.

Adapt handle with one-hand-brake

For stroke users.

One-hand-brake

Operate both brakes with One hand.
