

Start M2 Effect

At a Glance

- Individually adaptable
- Broad range of options and selections
- Modern design
- Three frame colors
- Easy handling
- Foldable to a convenient size

The Start M2 Effect is completely designed for individual adaptation. Only a wheelchair that is perfectly adjusted and corresponds to your requirements and your body proportions provides the best possible level of support and mobility. Our lightweight wheelchair offers many options for you to select, so that you can equip the M2 Effect entirely according to your wishes.

Accessories for every Situation

Even with basic equipment, the lightweight wheelchair has segmented, swing-away foot rests with angle adjustment. Therefore you can independently place your feet in the most comfortable position at any time. In addition, entering and leaving the wheelchair is made easier because you can simply swing away the foot rests. The knee lever brake promotes the required level of everyday safety. Securely keeping the wheelchair in place, is a snap.

The range of optional accessories is extensive: you can equip the M2 Effect with leg rests that can be tilted up, a seat back with adjustable angle, or the anti-tipper for additional safety. Your support person benefits from the height-adjustable push handle or the tip-assist which makes it easy to handle steps. For visual effects, three attractive frame colors are available.
